EFCO'S CONCRETE CONSTRUCTION & FORMING INSTITUTE

Developing Solutions for Construction Safety • Productivity • Profitability

EFCO's Concrete Construction and Forming Institute is a 45,000 square foot Education Center complete with a full-scale Demonstration Bay for hands-on learning opportunities.

This facility is designed to promote learning in all areas of concrete construction: formwork, shoring, proactive safety, concrete mixes, additives and pressures, innovative technologies and techniques.

The Institute offers an opportunity to cycle live production forming setups. These are full size setups using a crane and forklifts where applicable. It all works for those interested in "let's see it operate" to "training form cycling crews".

The Institute specializes in forming and shoring systems for:

- Commercial & Highrise
- Bridges & Highways
- Utilities & Water Treatment
- Civil & Industrial
- Stadiums & Arenas
- Parking & Transportation
- Oil & Energy

The EFCO Concrete Construction and Forming Institute is for people in the business of concrete construction. Our staff at EFCO will custom build and design your visit to meet your interests and needs.

We are working to "raise the bar" for technical competence at all levels. This includes the bar for EFCO's Research & Development, contractor's managers at all levels and disciplines, form buyer decision-makers, journeyman carpenters, and apprentices. We are all working together to provide the lowest in-place concrete costs for any project.

On the behalf Middlesex I would like to thank the EFCO Team for a great couple of days of fun and education. I think we all came away with a better understanding of what the EFCO can offer. The time spent with Dave at EFCO's Institute was outstanding, great job with explaining the different types of forms and the hands on experience that will pay dividends in the future. The tour through the plant gives you a much better appreciation of how much technology and hard work goes into producing the EFCO products.

Joe Phinney, Vice President - Construction Operations, Middlesex
